SCENE 02 — ABOUT

I design brand identities and packaging that sell, and I bring AI into creative work without taking the craft out of it.

I started with a technical education: that is where my method comes from. Then came brands and packaging for food and beverage companies, art direction for festivals and publishers, and video editing. For twenty years I also photographed sailing and motorsport, which taught me framing and rhythm.

Today AI is part of my method: I use it to explore more directions and get there faster, but every choice stays mine. I work remotely with companies, agencies and cultural organisations, in Italy and worldwide.

Craft can't be automated.
It can be multiplied.
